

PRODUCT INDEX

Pirtek offers a comprehensive and diversified range designed to meet the practical mounting needs of single or large networks of tubes and pipes.

Materials used for the manufacture of the supports vary according to application and include polypropylene for temperatures up to 90°C and aluminium for operating temperatures up to 400°C.

Top and base mounting plates are provided in galvanised and yellow passivated mild steel to maximise corrosion resistance.

The Series

Standard Series in polypropylene for pipe diameters from 6 mm to 50 mm. The variable mounting systems provide for weldable or extended and double or multiple plates as well as track and stacking systems. The standard series is common for installations up to 200 bar pressure.

Twin Series in polypropylene are used for tube pairs from 6mm to 42 mm. Pairs of the same size are generally mounted in one clamp, however clamps are available for differing diameters on request. Double Series are available in track mounting or stacking configurations.

Heavyweight Series are supplied in both aluminium and polypropylene and are for tubes and pipes from 6 mm to 325 mm. These are recommended for complex systems where high pressure and high oil speed occurs. Top plates are supplied in this series. High hexagon head screws are used for stack mounting.

Super Heavyweight Series are provided in galvanised mild steel and available for tube sizes from 150 mm to 800 mm. They are supplied with a standard base plate for weld mounting.

Lightweight Series (for compressed air plants). Available in polypropylene and used for tube sizes from 4 mm to 15 mm. These are recommended for the fitting of tubes in pneumatic applications. This series is supplied in either single or double styles and is also available for differing tube diameters within the clamp.

Low fitting costs, together with the vast range of clamping combinations make these tube and pipe supports an essential element in all industrial installations.
